End-to-End Supply Chain Ticketing Platform (Jira)

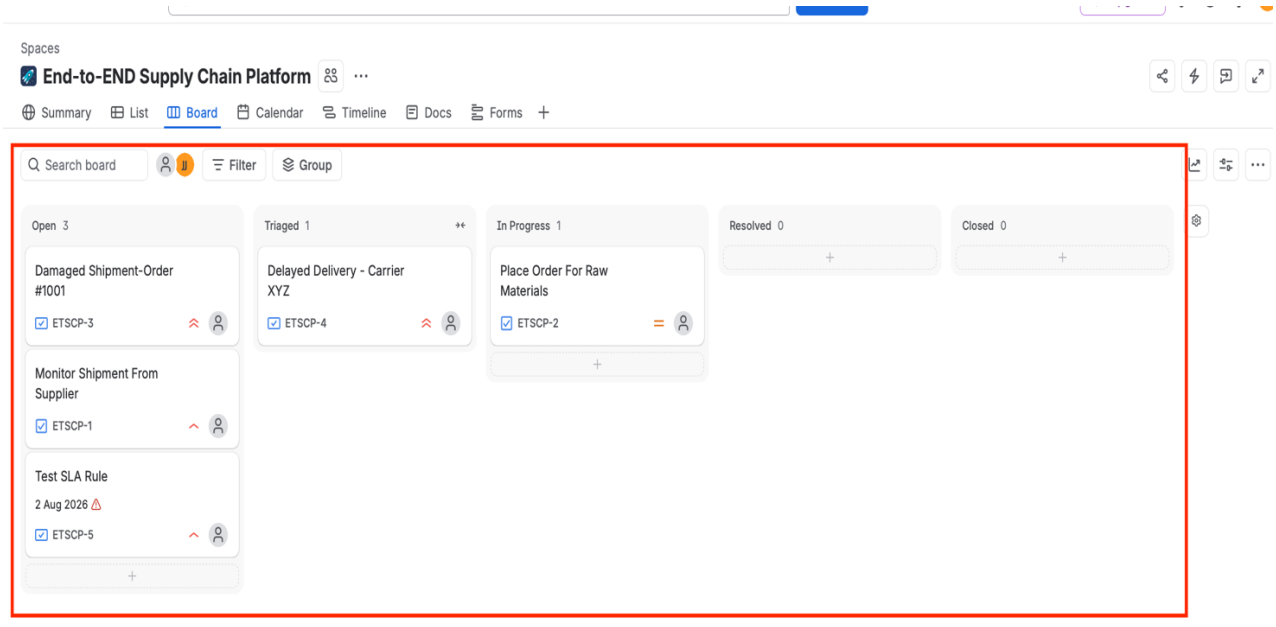

A supply chain issue-tracking system built in Jira to practise **project controlling, workflow design and process automation**. It combines a custom Kanban workflow, structured tracking fields, automation rules and a KPI dashboard, simulating how a real operations team would log, escalate and report on supply chain issues from report to resolution.

Jira space: End-to-END Supply Chain Platform (key: ETSCP) **Tools:** Jira (team-managed software space), Jira Automation, Jira Dashboards

1. Custom workflow (Kanban board)

A 5-stage workflow that mirrors how a supply chain issue moves from report to resolution

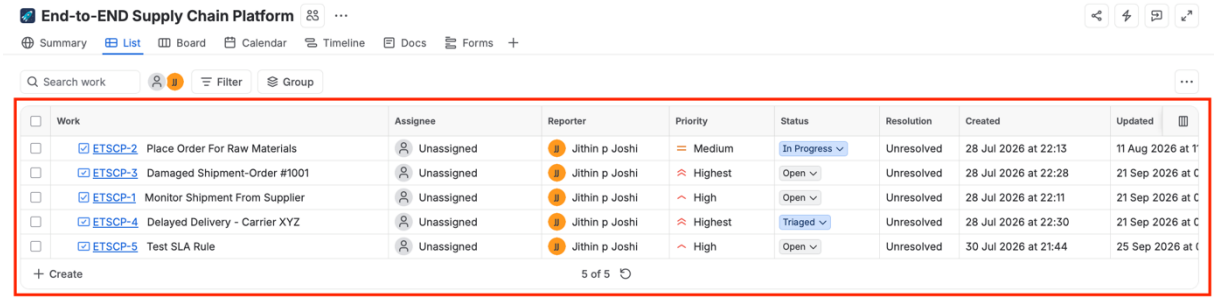

Open → Triaged → In Progress → Resolved → Closed

2. Sample issues (list view)

Five sample tickets cover typical supply chain events: supplier monitoring, raw material orders, damaged shipments and carrier delays. Each has a priority (Medium to Highest) and moves through the workflow above.

Key	Summery	Priority
ETSCP -1	Monitor Shipment From Supplier	High
ETSCP -2	Place Order For Raw Materials	Medium
ETSCP -3	Damaged Shipment - Order #1001	Highest
ETSCP-4	Delayed Delivery - Carrier XYZ	Highest
ETSCP- 5	Test SLA Rule	High

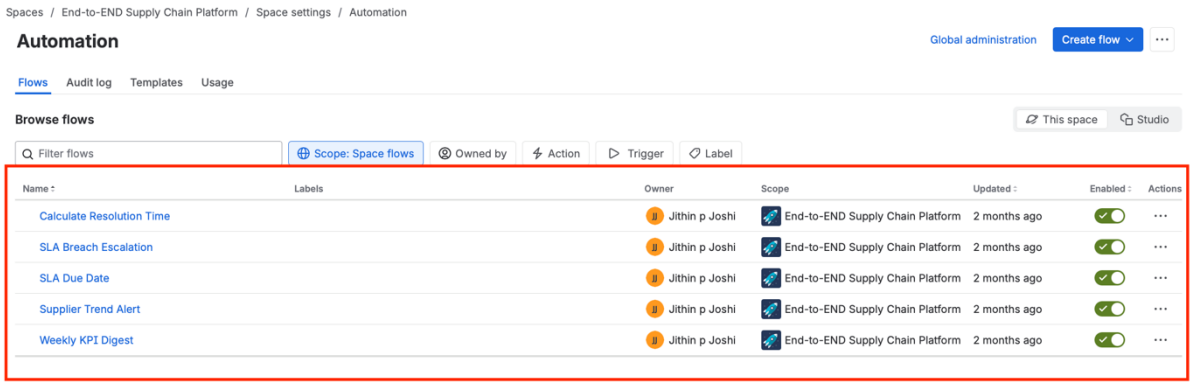

3. Automation rules

Five rules remove manual work and enforce SLAs

Rule	Purpose
SLA Due Date	Automatically sets a due date when an issue is created
SLA Breach Escalation	Escalates issues that pass their due date
Calculate Resolution Time	Records how long an issue took to resolve

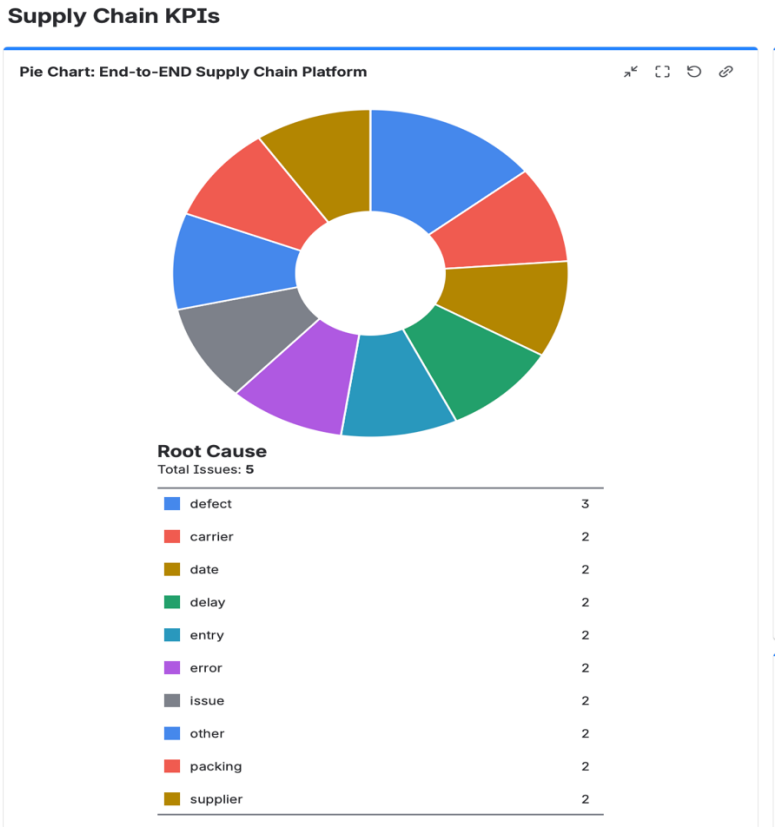

Supplier Trend Alert Time	Flags repeated problems linked to the same supplier
Weekly KPI Digest	Emails a weekly summary of issue health

4. KPI dashboard

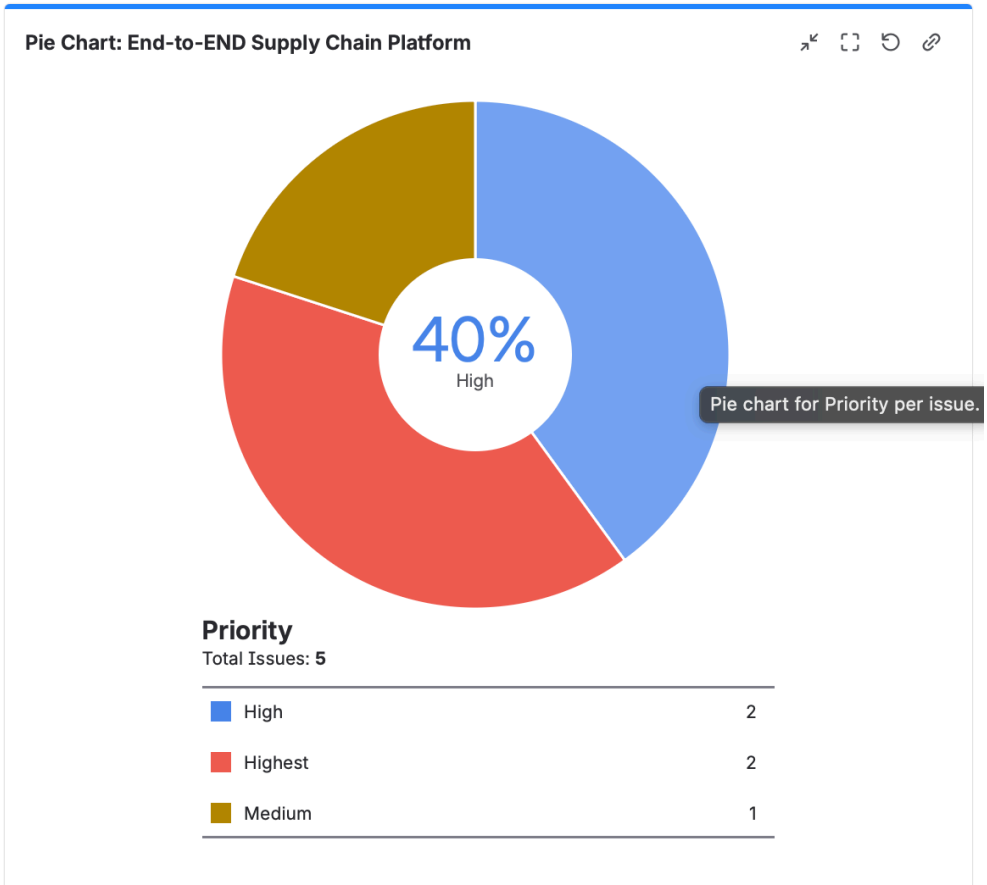

The **Supply Chain KPIs** dashboard gives a live view of issue

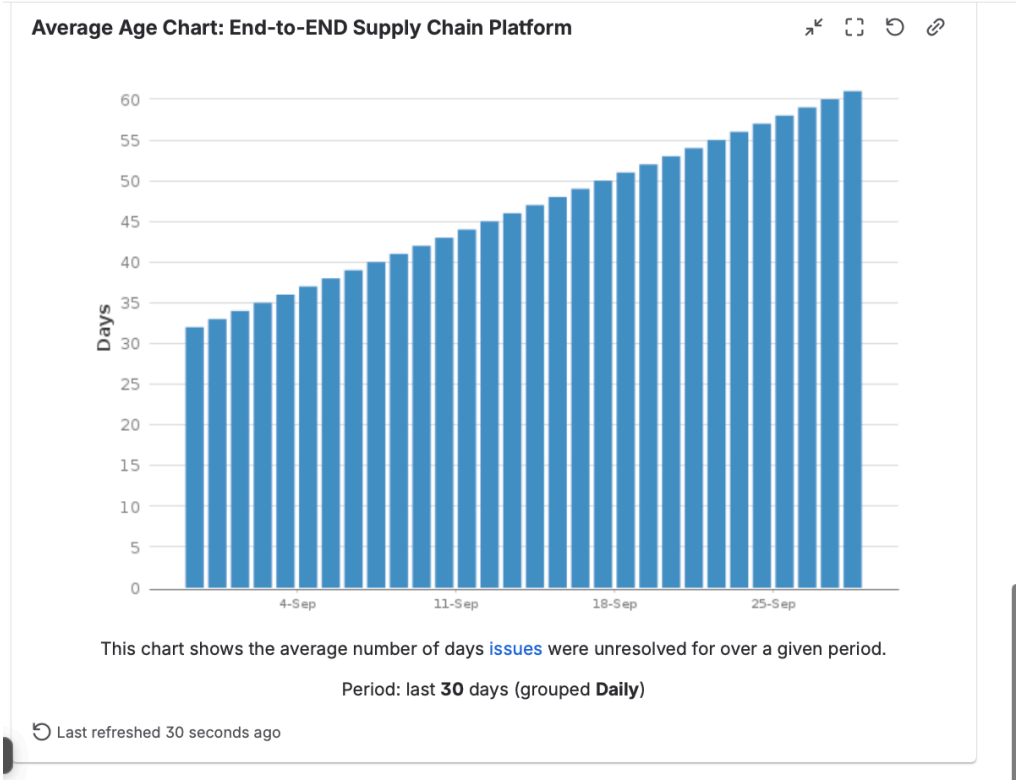

Root Cause breakdown and Created vs Resolved trend

Priority distribution and Average Age

What this project demonstrates

- Workflow design that matches a real operational process
- Use of custom fields for root cause and priority tracking
- Rule-based automation for SLAs, escalation and reporting
- KPI reporting with dashboards and scheduled email digests
